

Control Center

Business leaders struggle to both meet end-user demands for flexible project management and maintain control to scale processes successfully. Without a solution to combine both worlds, organizations are left with a combination of disconnected information and stakeholders, inconsistent process governance, and limited transparency.

Control Center

Overview

Smartsheet Control Center enables business leaders to deliver work at scale by driving consistency in work execution, automating portfolio reporting and reducing operation risk through automation. End-users get the freedom to work the way they want to, and business leaders maintain control to manage risks, improve collaboration, and enhance productivity, to accelerate innovation.

Roll Out Business Strategy, Consistently

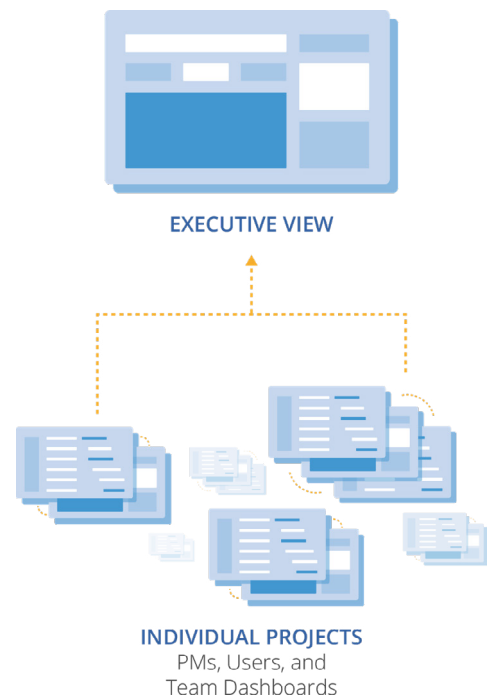

Unlike traditional approaches, Control Center helps to simplify the project lifecycle through consistency so your teams can get work done - faster.

Automate Portfolio Reporting

With consistent project information, Control Center helps remove the manual work involved in creating portfolio reports and summaries.

Manage Change at Scale

With Control Center, you can easily modify existing processes and quickly adapt to changing business requirements across your organization.

Smartsheet Control Center is designed for business leaders managing repeatable operations at scale and is available for additional fees to customers with Business and Enterprise plans.
