

Smartsheet Enterprise License Plan

The Smartsheet Enterprise License Plan provides the capabilities your organization needs to fully utilize the solution, the assistance to enable your team, and the security tools to manage licenses, data and access.

Work Management for All, In One Flexible Tool

The Smartsheet work management tool helps teams coordinate different types of work more efficiently, from simple projects to complex operational processes and everything in between.

In addition to the powerful product features, the Enterprise License Plan extends the Smartsheet platform by layering on enhanced administrative controls, data security, and integration options to ensure success. These additional capabilities (including a dedicated Customer Success manager) are designed with you in mind as adoption accelerates throughout your organization.

Security

Smartsheet has met and exceeded some of the world's most demanding security audit standards. From top tier data center security and redundancy to data encryption, keeping your data safe and secure is our most important job.

Control

Smartsheet puts you in control with powerful, easy to use admin tools designed for the enterprise. Manage license allocations, external collaborators, data storage platforms and more to customize the solution for your needs.

Integration

Smartsheet works alongside core business systems and cloud apps alike to close process gaps. A powerful API and prebuilt apps extend the value and create secure and seamless collaboration across your business processes.

“Smartsheet helps us to unlock the innovation within our organization and bridges the gap between traditional project management tools and Excel. It is invaluable to us – across the entire spectrum of our company.

Donna Long
CIO, Unisource Worldwide

Smartsheet Enterprise Capabilities

The core Smartsheet functionality combined with proven Enterprise capabilities enables organizations to simplify deployment, manage licenses to support information security processes, and insure company policies are adhered to while managing overall usage.

Seamless Access

Allow users to log in directly to Smartsheet using their corporate credentials with Single Sign-On and automatically lock out users who have had their corporate login credentials removed. With mobile apps and multi-platform support, users have the freedom to securely access their work on any device.

User Management

Flexible automated provisioning ensures anyone in your organization who creates an account is automatically added to your corporate account. You can also customize a flexible workflow for user authorization. Administrators also control external collaboration, define specific approved domains, vendors and partners.

Data Management

Set a default data storage platform for your users to upload files to Smartsheet. You can choose from Smartsheet's default flexible file storage, Box, Dropbox, or Google Drive – or a combination. Built-in attachment versioning controls help users collaborate more efficiently and shows a history of changes.

Easy Deployment

With Smartsheet, there's nothing to install, no hardware to maintain, software updates to track or DMZ setups to worry about. Tailor your users' on-boarding experience – display a customized welcome screen and internal company terms and conditions with the option to require users to accept prior to use. With Customer FastStart Assistance, you'll gain access to a team of Smartsheet Experts ready to tailor training for the organization, provide personalized support, and customize your Smartsheet experience.

Security

Smartsheet was built with strict security requirements and protocols to secure your data and give you control of user access. Smartsheet utilizes top tier data centers that publish SOC1, Type II reports in accordance with SSAE16, encrypts data stored with NIST approved ciphers, all with data backups and redundancy to deliver 99.9% uptime. Alongside granular user access controls, auditing capabilities give you visibility into every sheet change. To learn more, please visit www.smartsheet.com/security-info.

Extending the Platform

You can easily integrate and extend Smartsheet to work alongside your core business systems – delivering a seamless experience for your users. With Smartsheet's simple and intuitive API, which is built on industry standards, your developers can build rich integrations with other business systems. Additionally, use any of the pre-built Smartsheet apps and connect with other cloud-based apps including Box, Salesforce and Zimbra.
